

Graham-Mebane Lake Aquatic Habitat Enhancement Project

North Carolina Wildlife Resources Commission (NCWRC) and Graham Recreation and Parks are partnering to establish native aquatic vegetation and increase artificial habitat in Graham-Mebane Lake. Establishing native aquatic vegetation takes *a long time*... this will be a 5+ year project.

We aim to:

- Enhance fish habitat
- Improve fishing success
- Generally improve the lake's fishing resources

Fences will be used to protect developing native aquatic vegetation from being eaten by herbivores.

Polytree

Spool Attractor

White Water Lily

Water Willow

American Pondweed

Spatterdock
